

FALKEN ON THE PULSE

Fuel Efficiency

ZIEX ZE914

12 – 18 inch, 35 – 65 series

The ZIEX ZE914 ECORUN is a hybrid vehicle tyre with the cost saving fuel efficiency of a Low Rolling Resistance Compound, engineered with performance in mind. This tyre features an asymmetric tread pattern with four straight wide circumferential grooves for hydroplane resistance along with a dual high rigidity rib construction, allowing good wet and dry braking stability. Sport-comfort tyre ZE914 is indeed thoughtfully designed with users in mind. Targeted towards small and midsize vehicles. With a size list ranging from 12-inch to 18-inch. The ZE914 ECORUN is a great tyre for enthusiasts looking to save at the pump.

- EXCELLENT GRIP
- LOW TYRE ROLLING NOISE
- ENHANCED ROLLING RESISTANCE
- DESIGNED FOR SPORTS PERFORMANCE

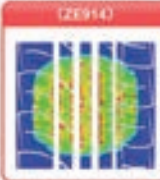

- ECORUN COMPOUND**
is engineered to optimal Low Rolling Resistance, meaning this tyre is capable of travelling further distances using less fuel.
- CHAMFERED CORNERS**
provides even wear performance.
- FOUR WIDE CIRCUMFERENTIAL GROOVES**
for hydroplane resistance and stability in wet conditions.
- SHOULDER RIB RIGIDITY**
optimizes both wet and dry handling stability especially at high speeds.

ZE914

Optimized Foot Print and Contact Pressure

The ZE914 spreads out the contact surface and distributes the contact pressure evenly over the entire contact area, making it less susceptible to irregular wear.

Optimized Wear Energy During Cornering

The ZE914's large shoulder blocks firmly take the load, optimizing the contact pressure and reducing wear energy.

14% reduced braking distance on wet roads

Silica Rich Compound and Wet Capabilities

Silica and polymer are joined by a coupling agent, creating a bond that is stronger and more flexible than carbon.

27% less rolling resistance compared to existing products

Heat Resistant Polymer designed for silica

The use of a heat resistant polymer, offering a heightened reaction to silica, increases the connecting points between the polymer and silica, preventing unnecessary heat generation by the polymer and thus reducing rolling resistance.

ZE914

Compared to existing products, which continue to give off heat with the entire tyre holding heat and causing higher rolling resistance, the ZE914 minimizes heat generation leading to lower rolling resistance.
